

Breathe Pure Clean Air

In Your Home and Office

During seasons of extreme heat and cold, most homes are sealed up tight. How healthy is the air you and your family breathe?

Whether your home is equipped with a central air or with radiant heat, the air you breath when your house is sealed up for the summer and winter months may be adversely effecting you and your family's health. A recent study found that the allergen level in super-insulated homes is 200% higher than in ordinary homes.

The EPA lists indoor air quality to be the fourth largest environmental threat to health in the United States.

As technology has advanced, our homes have advanced with it. Those drafty houses of the past have been replaced by new, energy-efficient homes. And this "sealing up" of our homes has saved much money. The downside, however, is that now we seldom breathe fresh air like we should. This is complicated by the fact that we now spend 90% of our lives inside. *The result? Chronic misery, the kind you and your family may be suffering with as you read this.*

Now for the first time, there is a Complete Solution!

NOW is the time to take responsibility for the indoor air that you and your family breathe. It's a fact: the APS 2000 cleans and purifies indoor air better than any other system you can buy!

EnviroMade™

The Most Advanced Home And Office Air Purification System In The World

Only Photo-Catalytic Oxidation Cleans Air Down To The Last Molecule

Protect Yourself and Your Family Improve Your Environment

The APS 2000 is the only Photo-Catalytic hybrid air purifying system available in the world today and is the biggest breakthrough in clean air in the last twenty years.

Many conventional indoor air cleaners rely on passing air through filters that work like sponges to capture contaminants. However, like a sponge, filters become saturated and release concentrated contaminants back into the indoor environment. Other air cleaning systems, such as ionizers and electrostatic units, produce and release dangerous ozone back into the air you breathe. Finally, there is an answer to keeping your indoor air clean, so you and your family can breathe quality air down to the last molecule.

1 Advanced PCO Technology

Unlike other air cleaners that collect and concentrate pollutants inside their filters, **Photo-Catalytic Oxidation** was developed to actually eliminate contaminants from indoor environments. **Photo-catalytic Oxidation** provides an absolute detoxification by eliminating rather than concentrating the contaminants in your air like other air cleaners.

2 Hybrid Purification System

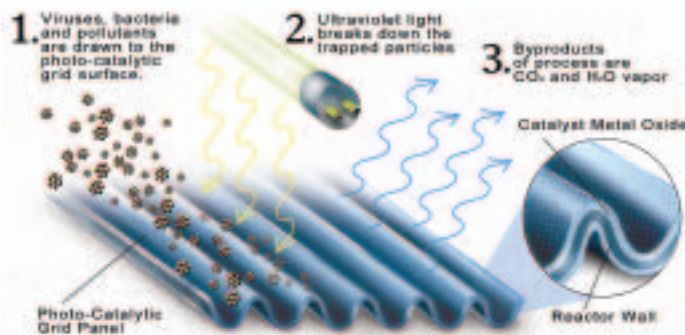

In addition to the patented **Photo-Catalytic Oxidation** technology, the APS 2000 integrates FIVE other powerful filtration stages, making it unlike any other air purification system available today.

3 State-of-the-Art Engineering Optimizes Air Circulation →

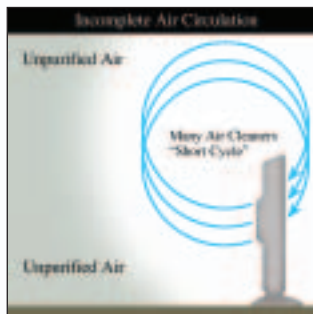

The APS 2000 was developed by aerospace engineers having extensive knowledge in air flow design. Where other devices "short cycle" and only filter the air immediately around the unit, the APS 2000 has been created to efficiently and effectively circulate and purify indoor air.

4 Energy Efficient

Costing only pennies to operate full-time, twenty four hours a day, the APS 2000 is the only indoor air quality product that removes all four sources of contaminants (particles, bioaerosols, gases, and odors). It is the only product that combines air filtration, purification and gas elimination into one integrated product.

Only Photo-Catalytic Oxidation provides an absolute detoxification of the air stream, rather than changing the phase or collecting and concentrating the contaminants like other air "cleaners". The Photo-Catalytic Oxidation reactor grid attracts indoor air pollutants including bacteria, viruses, and fungus onto the grid surface which are then reduced to carbon dioxide and water vapor when illuminated by the ultraviolet light.

Indoor Air Facts:

- According to the American College of Allergies, 50% of all illness is aggravated or caused by polluted indoor air.
- The Environmental Protection Agency (EPA) themselves declare that indoor air is anywhere from 2 to 10 times more hazardous than outdoor air.
- According to Scientific America, a baby crawling on the floor inhales the equivalent of 4 cigarettes a day, as a result of the out-gassing of carpets, molds, mildews, fungi, dust mites, etc.
- The EPA informs us that 6 out of 10 homes and buildings are "sick", meaning they are hazardous to your health to occupy as a result of airborne pollutants.

Protect yourself and your family. The APS 2000 cleans and purifies indoor air better than any other system you can buy!

Guaranteed!
